```
b = np.random.randn(150, 45) # b.shape = (150, 45)
c = np.dot(a,b)
```

```
What is the shape of c?
    c.shape = (150,150)
```

c.shape = (12288, 150)

Consider the two following random arrays "a" and "b":

The computation cannot happen because the sizes don't match. It's going to be "Error"! c.shape = (12288, 45)

**⊘** Correct Correct, remember that a np.dot(a, b) has shape (number of rows of a, number of columns of b). The sizes match because :

a = np.random.randn(12288, 150) # a.shape = (12288, 150)

"number of columns of a = 150 = number of rows of b"

for i in range(3):

for j in range(4):

3

5

**8.** Consider the following code snippet: # a.shape = (3,4)# b.shape = (4,1)

```
c[i][j] = a[i][j] + b[j]
    6
How do you vectorize this?
   c = a + b.T
```

0 / 1 point

0 / 1 point

1/1 point

c = a.T + b.T

```
⊗ Incorrect
```

c = a.T + b

**9.** Consider the following code:

a = np.random.randn(3, 3) b = np.random.randn(3, 1)

```
This will invoke broadcasting, so b is copied three times to become (3,3), and * is an element-wise product so c.shape will be (3, 3)
This will invoke broadcasting, so b is copied three times to become (3, 3), and * invokes a matrix multiplication operation of two 3x3 matrices so
c.shape will be (3, 3)
```

What will be c? (If you're not sure, feel free to run this in python to find out).

```
It will lead to an error since you cannot use "*" to operate on these two matrices. You need to instead use np.dot(a,b)
⊗ Incorrect
```

**10.** Consider the following computation graph.

u = a \* b

This will multiply a 3x3 matrix a with a 3x1 vector, thus resulting in a 3x1 vector. That is, c.shape = (3,1).

```
а
```

```
b
                                       v = a * c
                                                                                         J = u + v - w
                                      W = p + c
What is the output J?
```

```
J = (b - 1) * (c + a)
```

J = (a - 1) \* (b + c)

 $\int J = (c - 1)^*(b + a)$ 

**⊘** Correct Yes. J = u + v - w = a\*b + a\*c - (b + c) = a\*(b + c) - (b + c) = (a - 1)\*(b + c).
